

HAWK and puma update

<Dario Maiocchi dmaiocchi@suse.com>

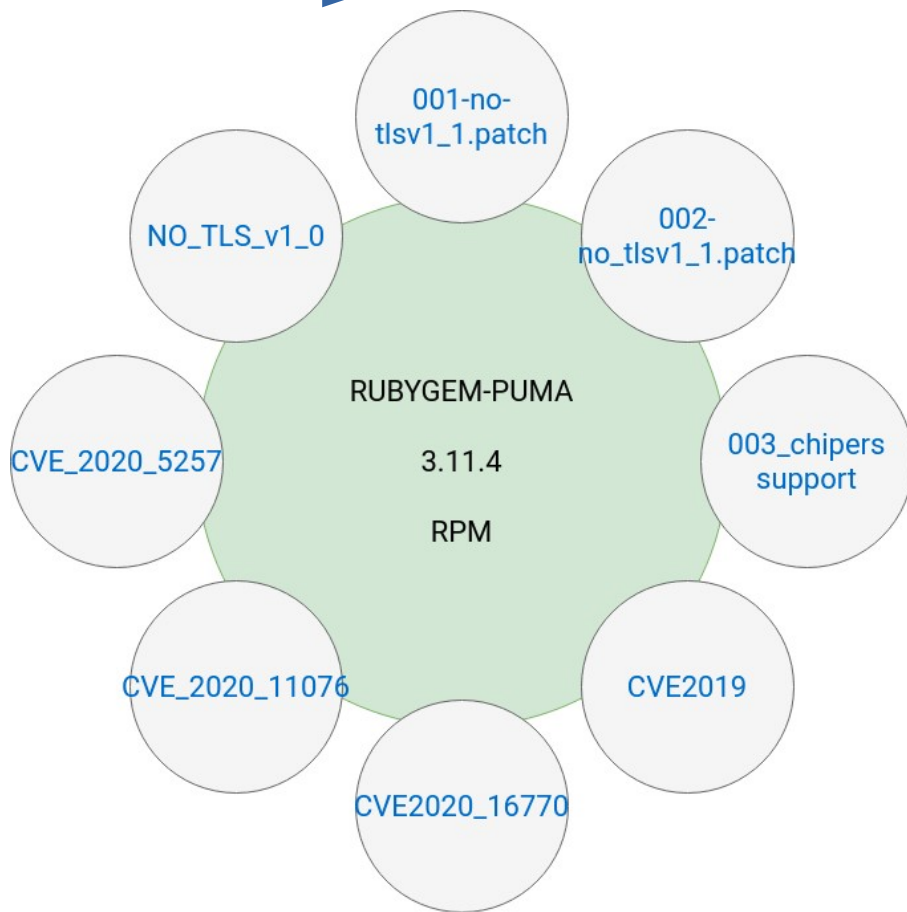

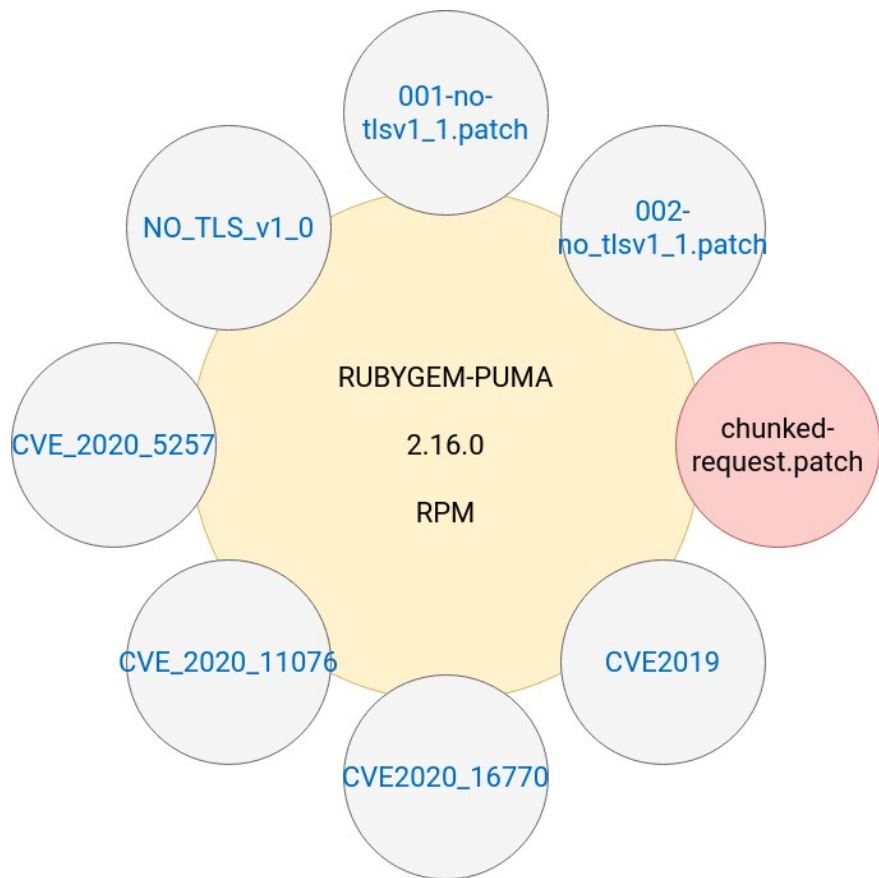

RATIONALE:

Update needed for supporting disabling TLS feature for puma/HAWK.

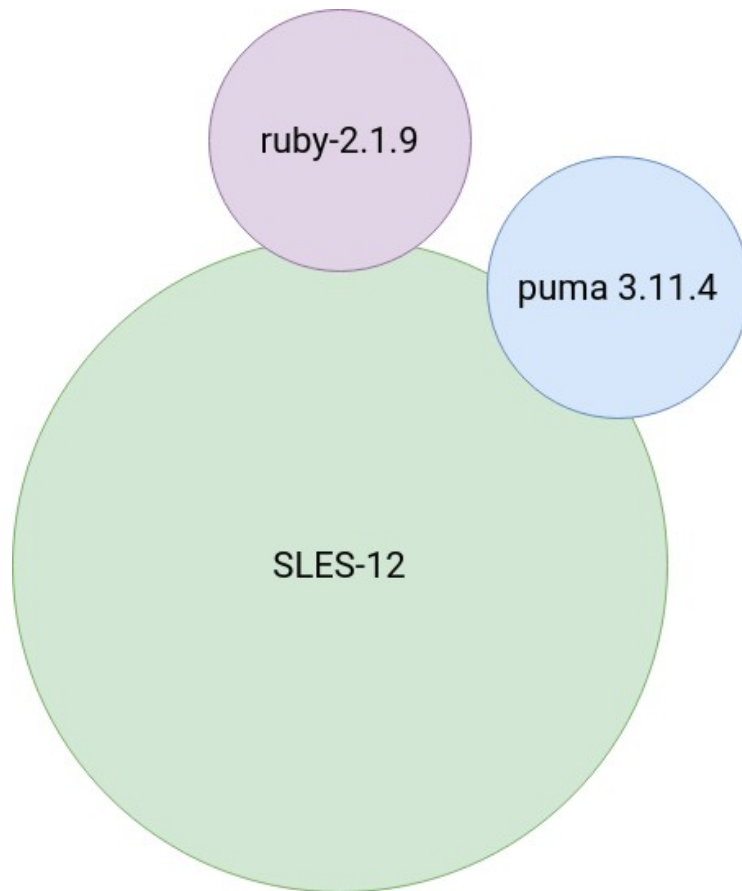

All Patches reworked

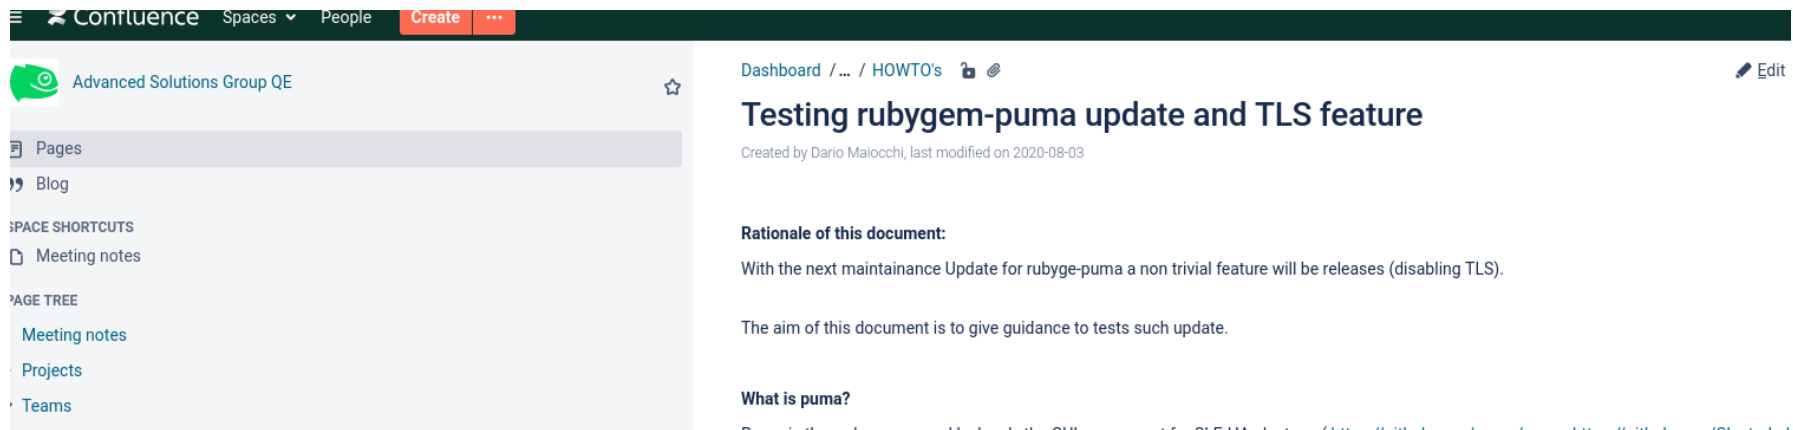

.....

The 3.11.4 version is the latest who support ruby 2.1.9p490

HOW TO TEST the Maintenance UPDATE:

The screenshot shows a Confluence interface. The top navigation bar includes 'Confluence', 'Spaces', 'People', and buttons for 'Create' and a menu. The left sidebar shows the 'Advanced Solutions Group QE' space with a star icon, and a list of pages including 'Pages', 'Blog', 'SPACE SHORTCUTS', 'Meeting notes', 'PAGE TREE', 'Meeting notes', 'Projects', and 'Teams'. The main content area displays the page title 'Testing rubygem-puma update and TLS feature' with a breadcrumb 'Dashboard / ... / HOWTO's' and an 'Edit' link. Below the title, it says 'Created by Dario Maiocchi, last modified on 2020-08-03'. The content includes a section 'Rationale of this document:' followed by the text 'With the next maintenance Update for rubygem-puma a non trivial feature will be releases (disabling TLS).', another paragraph 'The aim of this document is to give guidance to tests such update.', and a section 'What is puma?' followed by a partially visible paragraph starting with 'Puma is the web server used by rails, the C++ component for C++ HA clusters'.
